Building Climate Smart Agriculture Business & Impact
Session Objectives

IFC: Who we are, What we do

IFC Climate Business: Framing the Context

What is “Climate Smart Agriculture” (CSA)?

Where to Focus: Opportunities & Challenges

Making CSA Investments happen: Illustrative Structures
Our Purpose

To create opportunity for people to escape poverty and improve their lives by catalyzing the means for inclusive and sustainable growth through

- Mobilizing other sources of finance for private enterprise development
- Promoting open and competitive markets in developing countries
- Supporting companies and other private sector partners where there is a gap
- Helping to generate jobs and deliver essential services to the poor & vulnerable

Our Vision

That people should have the opportunity to escape poverty and improve their lives
IFC’s Strategy

- Maximize development impact, maintain financial sustainability

**FOCUS INDUSTRIES**
- Infrastructure
- Agribusiness
- Financial Inclusion
- Health and Education

**FOCUS REGIONS**
- Global Engagement
- Emphasizing Highest-Impact Opportunities in Each Region
- Global Engagement

**FOCUS CHALLENGES**
- Fragility and Conflict
- Climate Change
- Responding to Global Downturn

**CROSS CUTTING: Disruptive Technologies**

**SUSTAINABILITY**

Strong environmental, social, and governance standards are critical to IFC’s business growth and development impact
What We Do

- Integrated Solutions = Increased Impact

**INVESTMENT**
- Loans
- Equity
- Trade and Commodity Finance
- Syndications
- Derivative and Structured Finance
- Blended Finance

**ADVICE**
- Combining IFC’s Expertise and Tools to:
  - Help Create New Markets
  - Unlock Investment Opportunities
  - Strengthen Clients’ Performance and Impact
  - Improve Environmental, Social, and Corporate Governance Standards

**IFC ASSET MANAGEMENT COMPANY**
- Mobilizing and managing third-party capital for investment alongside IFC
IFC’s Global Reach

- 104 regional offices present in 98 countries worldwide
- Over 3,700 staff (60% based outside Washington D.C.)
>US$200 billion Invested in Emerging Markets since 1956

### Overview (FY16)

- **Shareholders**
  - 184 member countries

- **S&P & Moody’s rating**
  - AAA/Aaa

- **Total Assets**
  - US$87.5 billion

- **Portfolio**
  - US$52 billion

- **Long term investments made in FY16**
  - US$11 billion own account
  - US$7.7 billion mobilized

- **# of Projects in Portfolio**
  - 2,033 projects

Largest development institution focused on the private sector in emerging markets

### Track record (portfolio of $52 billion), as of June 2016

#### BY REGION
- Latin America and the Caribbean
- Europe and Central Asia
- Sub-Saharan Africa
- East Asia and the Pacific
- South Asia
- Middle East and North Africa
- Global

#### BY SECTOR
- Financial Markets
- Infrastructure
- Manufacturing
- Consumer & Social Services
- Funds
- Agribusiness & Forestry
- Oil, Gas, & Mining
- Trade Finance
- Telecommunications & Information Technology
The Global Agri Value Chain

Value chains are a key framework for understanding how a product moves from the producer to the customer. It is a vehicle for linking small businesses to the market.

Agribusiness Strategic Pillars:

**Enhance Food Security**: focus on production, waste reduction and income enhancement

**Promote Inclusive Economic Development**: focus on small farmers, women, and risk management

**Make Environmental & Social Sustainability** a business driver (e.g. irrigation, precision farming)
The Global Agri Value Chain: Key Issues

- Yield Improvement
- Farmer Incomes
- Access to Markets
- Access to Finance
- Access to Inputs
- Rural Infrastructure
- Land & Water rights

- Jobs
- Food Safety
- Occupational Health & Safety
- Resource Efficiency
- Waste and Emissions
- Supply Chain Logistics

- Access to Food
- Affordable Food
- Food Safety
- Nutrition
- Increasing demand for meat
IFC/WBG Solutions Across the Agri Value Chain

**Infrastructure (Ports, Rail, Roads, Storage)**
- Private Sector-led infrastructure
- Government Agri programs, with conditions for local benefits
- Agri-Parks or Special Agri Zones for focused infrastructure development
- Storage and Cold Chain PPPs

**Inputs (Fertilizer, Seeds, Crop Protection, Equipment, Irrigation)**
- Irrigation Program Demand
- “Right-Sizing” equipment for local markets
- Harmonization of national/regional seed and product registration
- Biopesticides and biological pest control options
- Innovation/ R&D

**Farming / Production**
- Sustainability criteria included in farm concept development
- Small farmer inclusion with commercial farm development
- Global Agriculture & Food Security Program (GAFSP)
- No-till and low-till practice adoption
- Vertical farming

**Processing**
- Rising meat & dairy demand
- Food Safety
- Vertical integration to capture margins and reduce agri-cycle price risks (e.g., feed+meat)
- Nutrition-based formulations
- Ready-to-eat foods for urban/ middle classes
- Mobile processing

**Retailing**
- Sustainable sourcing targets by leading retailers and brands
- Organic & Local produce
- Nutrition information & product labeling
- Quick-service restaurant/ food boom in emerging markets
Sectoral Themes Drive Our Agribusiness Agenda

**Water**
Global Irrigation Program
Inputs (e.g. seeds)

**Small Farmers**
Inclusive supply chains
Global Food Security Program (GAFSP)

**Land**
Princ. of Resp. Agri Investment
Africa Hybrid Investments
Scale: Ukraine/Brazil/Argentina

**Urbanization**
Safe food processing & efficient supply chains
Food affordability

**Animal Protein**
Mitigate impacts of full value chain (e.g., feed efficiency)
Seafood

**Nutrition & Innovation**
Food ingredients
Fortified foods and drinks
Resulting in a Diversified Portfolio (US$5.6 billion, FY16)

REGIONAL BREAKDOWN

IFC Total Agribusiness - FYE 16 (US$ 5.6 Billion)

- Global: 5%
- SS Africa: 14%
- Latin America: 18%
- East Asia: 17%
- South Asia: 8%
- Mid-East/ N.Africa: 12%
- Eastern/ Central Europe: 26%

SUB-SECTORAL BREAKDOWN

IFC Total Agribusiness - FYE 16 (US$ 5.6 Billion)

- Food Retail: 6%
- Forestry-Wood Products: 16%
- Fertilizers-AgriChems: 16%
- Ag Equipment: 1%
- Food: 1%
- Tropical Crops: 1%
- Sugar: 5%
- Fruits-Vegetables: 3%
- Grains-Oilseeds: 8%
- Beverages: 3%
- Dairy: 2%
- Animal Protein: 14%
- Traders: 6%
- Inputs: 5%
- Agri Finance: 11%
Agriculture is a Large Source of Global GHG Emissions

Agriculture, forestry & land use contribute ~24% of Global GHG Emissions (FAO, 2014)

The largest emitters in agriculture are:

- 40% Enteric fermentation
- 16% Manure left on pasture
- 13% Synthetic fertilizers
- 10% Paddy rice
- 7% Manure management
- 5% Burning of savannas

More droughts, floods, and heat waves are increasing production variability; and under BAU, Climate Change is expected to reduce yields by 10-50% by 2050 (CGIAR)
A Private-Sector Driven Agenda: It Impacts Their Business

At the Paris COP, 94% of country submissions included GHG reduction targets for agriculture, forestry, and land use sectors.

“Now is the time to meaningfully address the reality of climate change.” Joint Letter from CEOs of 14 Leading Food Companies Call on U.S. and World Leaders to Act.

280 companies made complete or specific commitments to ensure deforestation free supply chains.

20 global companies e.g. Starbucks, Unilever and MARS wrote to President Obama to say they rely on the stability of global supply chains for growth and profitability, and express concerns of severe weather events on their operations.

69 global companies e.g. Coca Cola, Nestle, and Tetra Pak, have committed to go 100% renewable.

Moody’s to use GHG emission reduction scenarios in their credit assessment.
What is Climate Smart Agriculture?
What is Climate Smart Agriculture?

World Bank definition: Climate-Smart Agriculture (CSA) is an approach to managing landscapes—cropland, livestock, forests and fisheries—that aims to achieve three “wins”:

1. Increased productivity to improve food security and boost farmers’ incomes;
2. Enhanced resilience to drought, pests, disease and other shocks;
3. Reduced greenhouse gas emissions.

CSA is an integrative approach aimed at increasing productivity sustainably and ensuring food security by building climate resilience and reducing greenhouse gas emissions from agriculture.

IFC Strategy: Support CSA by providing investments and advisory operations that contribute to one or more of the three pillars of CSA.
### What used to count at IFC:

- Use of renewable energy / waste to power
- Energy efficiency (*subject to a 15% savings threshold or reduction of 25,000 tons CO₂*)
- Green Buildings
- Reforestation / Sequestration (*subject to criteria*) / Avoided Deforestation (REDD+)

### Comprehensive & revised IFC definition of CSI:

- Water efficiency / savings
- Efficient irrigation
- Irrigation dams and water storage systems
- Appropriate fertilizer use / crop nutrient management
- Drought & disease resistant seeds
- Storage facilities
- Agricultural intensification
- Improvements to animal productivity
- Reduction in losses

- Switch to less water intensive crops
- Improvement to aquaculture productivity
- Agro-forestry
- Landscape approach to diversify economy
- Agricultural research
- Agricultural extension services
- Training and awareness raising
- Animal husbandry
- Improve efficiency of fishing fleet
- Invasive species management
Keeping our CSA claims practical but credible (no green-washing)

All projects have a clear link between investment activities and project impact & climate benefits. KPIs are being explored as a proxy for climate impact.

- Milk yield per cow
- Feed to food conversion ratio
- Reduction in post-harvest losses
- Reduction of water used per acre, animal, or ton of crops
- Reduction in fertilizer use per acre or ton of crops
- Increase in crop or feed production per acre
Opportunities & Challenges for Climate Smart Agri
A Private-Sector Driven Agenda: It Impacts Their Business

At the Paris COP, 94% of country submissions included GHG reduction targets for agriculture, forestry, and land use sectors.

“Now is the time to meaningfully address the reality of climate change.” Joint Letter from CEOs of 14 Leading Food Companies Call on U.S. and World Leaders to Act.

280 companies made complete or specific commitments to ensure deforestation free supply chains.

20 global companies e.g. Starbucks, Unilever and MARS wrote to President Obama to say they rely on the stability of global supply chains for growth and profitability, and express concerns of severe weather events on their operations.

69 global companies e.g. Coca Cola, Nestle, and Tetra Pak, have committed to go 100% renewable.

Moody’s to use GHG emission reduction scenarios in their credit assessment.
Megatrend: Increasing Demand for Global Agri Commodities

Global food demand is expected to rise...*

[Graph showing global food demand from 1961 to 2050, with a forecast line indicating increasing trends in meat, dairy, cereals, and starchy roots.]

...because of growing population, urbanization, and rising income*:

- **9.3 billion People** by 2050 (from 7.2 bn in 2013)
- **70% Urban** by 2050 (from 54% in 2014)
- **4.8 billion Middle-class** by 2030 (from about 1.8bn in 2009)

Higher consumption of meat/dairy → increase in demand for grains

- **To meet demand, food availability must increase by 70% by 2050***
- Growth in production is not in the same geographical locations as demand growth, due to constraints in climate conditions and land/water availabilities
- Global import of corn, soybeans, and wheat expected to grow by over 150 million MT to 465 million MT by 2030
- Investment needed in storage, logistics & processing in major origination countries (e.g. Brazil, Argentina, U.S., Ukraine, Russia) to meet growing demand
Global “Middle Class” to Exceed 1 Billion Households by 2013

Most of the increase will be in developing countries, particularly in Asia

Middle class in developing countries projected to increase 92% by 2023 vs. 11% in developed countries

Households w/real PPP incomes greater than $20,000 a year

Millions of Households

Developing countries

Developed countries

International Finance Corporation

World Bank Group
Demand for Meat & Dairy rises with Per Capita Income

Poultry Meat Consumption by country and income level (kg/person/year).
Long-Term Challenges (1):
Already constrained agri lands further limited by climate impacts

*Agri supply chains are under great pressure in the short-, medium- and long term.*
Long-Term Challenges (2): Growing Food Is a Big Part of the Climate Problem- and the Solution

Addressing land use change and reducing agriculture’s GHG footprint is vital

LAND USE CHANGE
~11% OF TOTAL

AGRICULTURE
~13% OF TOTAL

TOTAL EMISSIONS

DEFORESTATION 63%
CROPLAND OUT OF AGRIC 25%
BURNING BIOMASS 11%
Land Use Change 11%
Agriculture 13%
Electricity & Heat Production 25%
Industry 21%
Transport 14%
Buildings 6.4%
Other Energy 9.6%

LIVESTOCK 62%
FERTILIZERS 16%
RICE 10%
OTHER 12%
IFC’s Key Climate Smart Agri Focus Areas: (1) Animal Protein

• Increasing productivity sustainably is climate smart. There is a direct correlation between increased yield per ha or kg of meat & milk and GHGs reduced.

• Levers contributing to this include:
  ✓ Improved animal health
  ✓ animal husbandry
  ✓ manure management with bio-digesters
  ✓ confined stalls
  ✓ better feed production
  ✓ better feeding practices / improved nutrition
  ✓ Cold chain
  ✓ Improved aquaculture productivity
IFC’s Key Climate Smart Agri Focus Areas:
(2) Land & Crops

- **Precision farming** is a farm management system that is information and technology based, and site specific. These technologies include:
  - Higher yielding seed varieties
  - Efficient irrigation
  - Soil testing
  - Laser soil leveling
  - GPS equipped farm equipment
  - Remote sensing and sensors
  - Integrated pest management
  - Reduced/no till agriculture
  - Appropriate use of fertilizers

...and technologies that help farmers adopt the above

- **Examples:** Bioparques
IFC’s Key Climate Smart Agri Focus Areas: (3) Reduce Losses

• ~30% of the food grown is wasted
• An important objective of CSA and theme for IFC is to reduce post-harvest losses
• This includes:
  ✓ Investments in storage facilities (including cold chain) to reduce losses.
  ✓ Investing in green buildings (EDGE tool).
  ✓ Renewable energy.
  ✓ Upgrading trucks and equipment to reduce losses and fuel consumption.
  ✓ Improving transport logistics (including relocating warehouses or storage facilities) to reduce fuel consumption.
## Challenges of “scalable” climate interventions / programs

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
<th>Details</th>
</tr>
</thead>
</table>
| 1 | Interventions inherently small (\$ capex – wise) | - Tend to be one part of a larger corporate investment program / IFC financing  
- Need to aggregate – via financial institutions, distributors |
| 2 | Climate Smart Interventions at Farmer Level | - Lack of knowledge & risk aversion of farmers to adopt new technologies  
- Who takes farmer credit risk?  
- IFC mainly works with aggregators – traders, processors |
| 3 | Align Incentives | - Large vendors / food companies have scale but are often unwilling to have “skin in the game”; have access to competitive financing |
| 4 | Need a Business Case | - Acceptable payback required for clients to take commercial financing – if not we need donor money (such as GAFSP) to de-risk & motivate |
| 5 | What are we measuring? | - how to capture concepts of agri intensification (higher productivity / yield)  
- not practical or possible to measure GHG savings at farm level |
Some Questions for Discussion

• What do you view as the best opportunities?
  ▪ by region, sector or technology
  ▪ addressable by the IFC - sound investment thesis
  ▪ how to go from small to big (business + impact)

• How can IFC best leverage GAFSP and other partners?
STRUCTURING CLIMATE SMART AGRI INVESTMENTS
Case Study: IFC’s Global Irrigation Program
Efficient irrigation can save up to 50% of water compared to traditional food irrigation

**Food irrigation (gravity flow)**
- Water use efficiency (WUE): 50%

**Efficient / pressurized irrigation**
- Water use efficiency (WUE): 85-95%

...but adoption of efficient irrigation in EMs is very low (<10%)
Agriculture uses 75% of all fresh water

Global water consumption by sector

- Agriculture: 75%
- Industry: 20%
- Domestic use: 5%

Food demand to increase by 40% by 2030

Limited availability of agricultural land

Water withdrawals to exceed fresh water availability by more than 40% under business-as-usual scenario

Agricultural growth has to come from higher yields from the same area of land with more efficient use of water and other inputs
Efficient irrigation makes business sense

40% of all food production comes from the 20% of farmland that is irrigated

**Benefits of efficient irrigation**
- Higher and consistent yields
- Reduced water use
- Increased farmer revenue
- Reduced energy, fertilizer and chemicals use
- Lower GHG
- Short payback period

**Rates of adoption in select countries**

IFC-led financing platform directed to facilitate the sale of efficient irrigation equipment, systems and related services to farmers in the emerging markets
IFC’s Key Climate Smart Agri Focus Areas: (1) Animal Protein

### Project structure

- **IFC Loan**
  - Loan to **Irrigation Company**
    - Equipment sales
  - Loan to **Dealer/Offtaker**
    - Equipment sales
  - Loan to **Medium/Large Farmers, or coops**

### Overview

- IFC’s traditional direct interventions
- Corporate / project finance with recourse to borrower / investee company
- Project size typically above US$[5-10] million
- For irrigation companies / dealers / offtakers
- Purpose of financing:
  - Purchase of irrigation equipment and ancillary services and infrastructure
  - Capex needs, e.g. establishing irrigation equipment production facilities in EMs
  - Enable dealers to facilitate sales
Aggregation requires financial intermediation

**Project Structure**

- **World Bank (WB) / donors**
  - Counter-guarantee / First Loss Cover [x]%
- **IFC**
  - Guarantee [50]%
  - Loans 100%
- **Financial Intermediary**
  - Repay Loans
- **Irrigation Company**
  - Equipment / Systems & Training
- **Dealers / Farmers**

**Overview and risk profile**

- Financial Intermediary (Bank, Financial Institution, Off-taker with track-record in farmer lending/ advances) provides loans to Dealers / Farmers
- Dealers/ Farmers use credit to buy irrigation equipment from Irrigation Company (“IC”)
- IC provides capacity building to farmers
- Dealers/ Farmers repay loans over [1-5] years
- Financial Intermediary collects from farmers
- If farmers default, Financial Intermediary makes claim to IFC for X% of each defaulted loan; IFC makes claim to WB/ donors (for up to [x]% of portfolio)

* Counter-guarantee / first loss could also potentially be provided by IC
Case Study: Roya Renovation Facility in Nicaragua

- US$30 million Risk Sharing Facility provides working capital loans to help farmers replant & renovate coffee crops affected by Roya fungus

- Project mitigates climate change related risks through planting rust resistant coffee varieties; and monitoring shade, nutrition, weeding, use of fungicides

- IFC provided a US$12 million loan. Importantly, ECOM and Starbucks were part of the financing solution, along with the IDB and GAFSP.

Innovative structure to spread risks

Case Study: Rubber Renovation Facility in Liberia

- Firestone buys rubber from farmers in Liberia. **IFC provides financing to Firestone farmers in collaboration with a local bank in Liberia** so farmers can rehabilitate & replant rubber trees.
- **First loss** provided by GAFSP and BioCarbon Fund (the World Bank).
- **Extensive advisory services** are planned for both farmers and the local bank.
- **Firestone commits off-take agreements** with individual farmers.
- IFC is providing assistance to local bank on **E&S risk screening process**.
Case Study: Rwanda Farmer Financing Facility

Farmer financing facility with KCB Rwanda in support of local farmer cooperatives that will supply maize and soybeans to the DSM plant through off-take arrangements.
